

SUCCESS STORIES

Land Range Safety Management Tool

THE CHALLENGE

Following a fatality on a live-fire range in 2017, the ADF conducted detailed analysis to improve management and procedures for live-fire range activities.

A key focus was the provision of a system to track qualifications, experience and currency of range-qualified personnel and improve the live fire range planning and authorisation process.

WHAT WE DID

As a trusted industry partner responsible for developing and supporting AusPEX, Sigma Bravo worked in partnership with the Combined Arms Training Centre to deliver the Land Range Safety Management Tool (LRSMT).

Working in close collaboration, Defence and Industry augmented and expanded existing software to deliver an enhanced capability for ADF at a fraction of the time and cost.

Delivered in 8 Months

RESULTS

LRSMT provides the Australian Army with a significantly improved process for range planning, authorisation, management and assurance to facilitate the conduct of safe, realistic, and tailored live-fire training.

- Reduces administrative overhead
- Minimises human error
- Increases capability
- Improves efficiency
- Helps ensure safety of personnel
